# CONSUMER PRICE INDEX: SEPTEMBER 2000

The Consumer Price Index for All Urban Consumers (CPI-U) increased 0.5 percent in September, before seasonal adjustment, to a level of 173.7 (1982-84=100), the Bureau of Labor Statistics of the U.S. Department of Labor reported today. For the 12-month period ended in September, the CPI-U increased 3.5 percent.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) rose 0.6 percent in September, prior to seasonal adjustment. The September level of 170.4 was 3.5 percent higher than the index in September 1999.

## CPI for All Urban Consumers (CPI-U)

On a seasonally adjusted basis, the CPI-U rose 0.5 percent in September, following a 0.1 percent decline in August. The upturn reflects a sharp turnaround in the energy index, which increased 3.8 percent in September after declining 2.9 percent in August. In September, the indexes for petroleum-based energy and for energy services increased 5.9 and 1.7 percent, respectively. The food index rose 0.2 percent. The index for food at home increased 0.1 percent after advancing 0.3 percent in August. An increase in the index for fruits and vegetables more than offset declines in the indexes for cereal and bakery products, for meats, poultry, fish, and eggs, and for nonalcoholic beverages. Excluding food and energy, the CPI-U rose 0.3 percent in September, following five consecutive monthly increases of 0.2 percent. A sharp increase in apparel prices and an upturn in the tobacco index were principally responsible for the larger advance in September.

Table A. Percent changes in CPI for All Urban Consumers (CPI-U)

r = Revised percent changes based on indexes recalculated to correct for an error in the residential rent and owners' equivalent rent components of the index. For this reason, some of the figures above and elsewhere in this report differ from those previously published. Information on the error and all corrected index values were made available on September 28. For details, see Revisions in January to August 2000 CPI Data on the BLS website (http://stats.bls.gov/cpihome.htm) or contact (202) 691-7000.

See page 6 for a note on the use of hedonic models to adjust prices of selected products in the CPI for changes in quality.

Consumer prices rose at a seasonally adjusted annual rate (SAAR) of 2.8 percent in the third quarter. This followed increases in the first and second quarters at annual rates of 6.1 and 2.6 percent rate, respectively, and brings the year-to-date annual rate to 3.8 percent. This compares with an increase of 2.7 percent for all of 1999. Energy prices, which turned up sharply in 1999, have continued their advance thus far in 2000. The energy index, which increased 13.4 percent in 1999, has risen at a 18.4 percent SAAR thus far in 2000. In the first nine months of 2000, petroleum-based energy costs increased at a 25.2 percent SAAR, and charges for energy services rose at a 11.7 percent annual rate. The food index has risen at a 2.7 percent SAAR thus far in 2000, following a 1.9 percent increase for all of 1999. The index for food at home, which advanced 1.7 percent in 1999, has risen at a 2.8 percent rate thus far in 2000. Among the major grocery store food groups, the index for meats, poultry, fish, and eggs, has shown the sharpest advance. In particular,

meat prices, which began to rise in mid-1999, have continued to increase throughout most of the first 9 months of 2000, advancing at a 7.1 percent SAAR after increasing 3.6 percent in all of 1999.

Excluding food and energy, the CPI-U advanced at a 2.7 percent SAAR in the third quarter, following increases of 3.4 and 2.2 percent, respectively, in the first two quarters of 2000. The 2.8 percent SAAR in the first nine months of 2000 compares with a 1.9 percent rise for all of 1999. Shelter costs, which have risen at a 3.6 percent SAAR thus far this year after increasing 2.5 percent in all of 1999, and medical care costs have been largely responsible for the acceleration thus far in 2000. The rates for selected groups for the last five and three-quarter years are shown below.

| | Percentage change 12 months ended in December | | | | SAAR 9 mos. ended in Sep. | |
|---|---|---|---|---|---|---|
| | 1995 | 1996 | 1997 | 1998 | 1999 | 2000 |

| All items less food and energy | 3.0 | 2.6 | 2.2 | 2.4 | 1.9 | 2.8 |

The food and beverages index increased 0.1 percent in September. The index for food at home, which rose 0.3 percent in August, increased 0.1 percent in September. The index for fruits and vegetables rose 0.8 percent in September, following increases of 1.0 and 1.2 percent in July

and August, respectively. Over the past 12 months, however, fruit and vegetable prices have risen 1.0 percent. In September, within the fruits and vegetables group, the indexes for fresh fruits and for fresh vegetables rose 0.9 and 1.7 percent, respectively. The index for processed fruits and vegetables declined 0.7 percent. The indexes for cereals and bakery products, for nonalcoholic beverages, and for meats, poultry, fish, and eggs, each declined in September. Meat prices turned down in September; the indexes for beef and for pork declined 0.4 and 0.8 percent, respectively. However, over the past 12 months beef and pork prices are up 7.1 and 7.8 percent, respectively. Poultry prices declined for the second consecutive month--down 0.2 percent in September--but have risen 0.7 percent since September 1999. The index for dairy products rose 0.4 percent and the index for other food at home increased 0.1 percent in September. The other two components of the food and beverages index--food away from home and alcoholic beverages--increased 0.3 and declined 0.2 percent, respectively.

The housing index increased 0.4 percent in September, following a 0.2 percent rise in August. The index for fuels and utilities, which declined 0.1 percent in August, increased 2.0 percent in September. The index for fuel oil increased 12.2 percent in September after declining 0.1 percent in August, and has advanced 35.1 percent over the past nine months. The index for natural gas, which declined 0.7 percent in August, rose 5.1 percent in September and has risen 25.4 percent thus far in 2000. The index for electricity, which was unchanged in August, increased 0.1 percent in September and has risen 2.0 percent in the first nine months of the year. Shelter costs increased 0.2 percent in September. Within shelter, the indexes for rent and for owners' equivalent rent increased 0.4 percent and 0.3 percent, respectively, while the index for lodging away from home fell 0.1 percent. The index for household furnishings and operations rose 0.2 percent in September.

The transportation component, which declined in each of the preceding two months, turned back up in September, advancing 1.0 percent. Gasoline prices resumed their upward trend in September--increasing 5.4 percent--after registering declines in each of the preceding two months. Gasoline prices have advanced 20.4 percent since December after advancing 30.1 percent in all of 1999. The index for new vehicles declined 0.2 percent in September, the same as in August. Price declines on 2000 models more than offset price increases associated with the 2001 models. (About 10 percent of the new vehicle sample in September was represented by 2001 models.) The index for used cars and trucks increased 0.6 percent in September, following declines in each of the preceding two months. Public transportation costs decreased 1.3 percent, largely as a result of a 2.2 percent decline in airline fares. Despite the September drop, airline

fares have risen 8.9 percent thus far in 2000.

The index for apparel rose 1.6 percent in September after advancing 0.2 percent in August. (Prior to seasonal adjustment, apparel prices rose 4.1 percent, reflecting the introduction of higher-priced fall-winter wear.)

Medical care costs rose 0.4 percent in September to a level 4.3 percent higher than a year ago. In September, the index for medical care commodities--prescription and nonprescription drugs and medical supplies--rose 0.2 percent. The index for medical care services rose 0.4 percent. Charges for professional services and for hospital and related services increased 0.3 and 0.6 percent, respectively.

The index for recreation costs increased 0.1 percent in September, the same as in August.

The index for education and communication declined 0.7 percent in September. Educational costs rose 0.4 percent, partially offsetting a 1.7 percent decrease in the index for communication. The index for tuition, other school fees, and child care increased 0.4 percent. (Prior to seasonal adjustment, this index rose 1.7 percent.) Within the index for communication, the indexes for telephone services and for personal computers and peripheral equipment fell 1.9 and 1.5 percent, respectively.

The index for other goods and services increased 1.1 percent in September, following a 0.3 percent decrease in August. Cigarette prices, which declined 1.7 percent in August, increased 3.8 percent in September, accounting for about 85 percent of the overall September advance in this major group.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.6 percent in September.

Consumer Price Index data for October are scheduled for release on Thursday, November 16, 2000, at 8:30 A.M. (EST).

---

## Extending the use of hedonic models to adjust prices for changes in quality

The Bureau of Labor Statistics (BLS) is continuing to expand the use in the Consumer Price Index (CPI) of quality adjustments derived from hedonic models. As first announced at the time of the July 2000 CPI release, effective with the CPI for October 2000, BLS will extend hedonic quality adjustment to Washing machines and Clothes dryers. These items are both part of the Major appliances stratum.

A hedonic model decomposes the price of a consumer product into implicit prices for each of its important features and components, thereby providing an estimate of the value of each feature and component. BLS plans to extend this method to additional items in the CPI. As BLS does so, it will give CPI users notice at least three months before the first use of hedonic quality adjustment for each additional item and will have detailed papers on the models to be employed available by the time of first use.

The relative importance (share of weight), as of December 1999, of the Major appliances stratum was 0.205 percent in the CPI for all Urban Consumers (CPI-U) and 0.236 percent in the CPI for Urban Wage Earners and Clerical Workers (CPI-W). Within Major appliances, Washing machines are estimated to represent 18 percent of the weight and Clothes dryers about 13 percent.

The hedonic models that BLS analysts developed for Washing machines and Clothes dryers use observations collected for the CPI, supplemented with additional observations that the BLS collected specifically for this purpose. Papers describing this work are in preparation and will be available before release of the October 2000 CPI.

Additional work on hedonic quality adjustment is underway at BLS.

## Facilities for Sensory Impaired

Information from this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200, Federal Relay Services: 1-800-877-8339. For a recorded message of Summary CPI data, call (202) 691-5200.

---

## Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a market basket of goods and services. The Bureau of Labor Statistics publishes CPIs for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 87 percent of the total population and (2) a CPI for Urban Wage

Earners and Clerical Workers (CPI-W) which covers 32 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and other goods and services that people buy for day-to-day living. Prices are collected in 87 urban areas across the country from about 50,000 housing units and approximately 23,000 retail establishments-department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of fuels and a few other items are obtained every month in all 87 locations. Prices of most other commodities and services are collected every month in the three largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits or telephone calls of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 26 local areas. Area indexes do not measure differences in the level of prices among cities, they only measure the average change in prices for each area since the base period.

The index measures price change from a designed reference date-1982-84 which equals 100.0. An increase of 16.5 percent, for example, is shown as 116.5. This change can also be expressed in dollars as follows: the price of a base period market basket of goods and services in the CPI has risen from $10 in 1982-84 to $11.65.

For further details visit the CPI home page on the

Internet at http://stats.bls.gov/cpihome.htm or contact our CPI Information and Analysis Section on (202) 691-7000.

---

## Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example below illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

### Index Point Change

| | | |
|---|---|---|
| CPI | 115.7 | |
| Less previous index | | 111.2 |
| Equals index point change | 4.5 | |

### Percent Change

| | | |
|---|---|---|
| Index point difference | | 4.5 |
| Divided by the previous index | | 111.2 |
| Equals | 0.040 | |
| Results multiplied by one hundred | | 0.040x100 |
| Equals percent change | 4.0 | |

---

## A Note on Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes

seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year--such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data also are used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-12-ARIMA Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data, e.g., data from 1995 through 1999 were replaced at the end of 1999. The seasonal movement of all items and 54 other aggregations is derived by combining the seasonal movement of 73 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 73 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used for the last 5 years, but the seasonally adjusted indexes will be used before that period.

Seasonally adjusted data, including the All items index levels, are subject to revision for up to five years after their original release. For this reason, BLS advises against the use of these data in escalation agreements.

Effective with the calculation of the seasonal factors for 1990, the Bureau of Labor Statistics has used an enhanced seasonal adjustment procedure called Intervention Analysis Seasonal Adjustment for some CPI series. Intervention Analysis Seasonal Adjustment allows for better estimates of seasonally adjusted data. Extreme values

and/or sharp movements which might distort the seasonal pattern are estimated and removed from the data prior to calculation of seasonal factors. Beginning with the calculation of seasonal factors for 1996, X-12-ARIMA software was used for Intervention Analysis Seasonal Adjustment.

For the fuel oil and the motor fuels indexes, this procedure was used to offset the effects that extreme price volatility would otherwise have had on the estimates of seasonally adjusted data for those series. For the breakfast cereal index, the procedure was used to offset the effects of price-cutting among cereal manufacturers. For the educational books and supplies index, the procedure was used to account for greater than normal sale prices on educational reference books. For some alcoholic beverage series, Intervention Analysis Seasonal Adjustment was used to offset the effects of increased brewer's costs along with increased demand for specialty beers. For the nonalcoholic beverages index, the procedure was used to offset the effects of a large increase in coffee prices due to adverse weather. For the fats and oils series, the procedure was used to account for lower domestic butter stocks, lower cold storage supplies, and anticipation of a bumper soybean crop. For the new trucks index, the procedure was applied to account for loyalty rebates offered to customers by American automakers. For the water and sewerage maintenance index, the procedure was used to account for a data collection anomaly.

A description of Intervention Analysis Seasonal Adjustment, as well as a list of unusual events modeled and seasonal factors for these items may be obtained by writing the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, Washington, DC 20212 or by calling Claire McAnaw Gallagher on (202) 691-6968 or sending e-mail to Gallagher_C@BLS.GOV.
